Record Task- **Implemented Changes**

1. **Browser Persistence:** Updated browser behavior to reopen the application at the last accessed route after closing and reopening the browser.

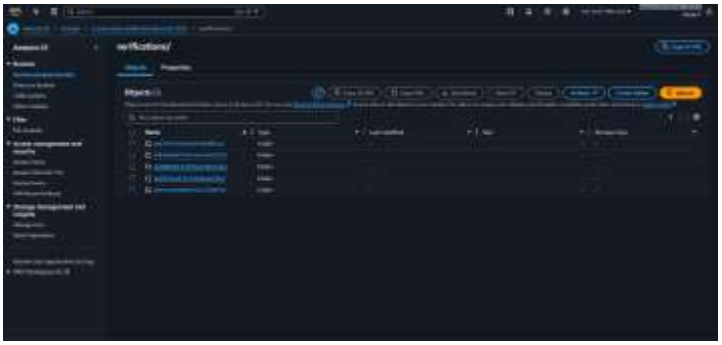

2. **Multiple Language Support:** Added support for different languages to improve accessibility for users.

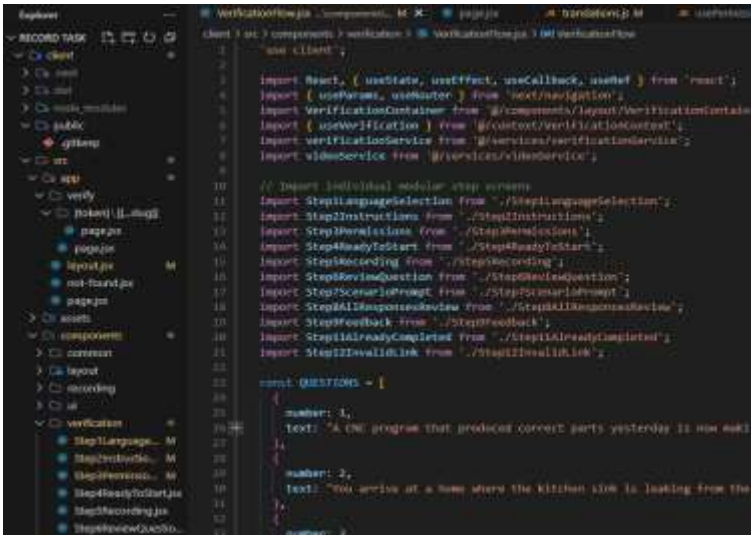

Google Translate Integration: Integrated Google Translate to enable translation of application content into different languages.

3. **MongoDB to AWS S3 Migration:** Migrated video storage from MongoDB GridFS to Amazon S3 and AWS IAM role-based authentication.

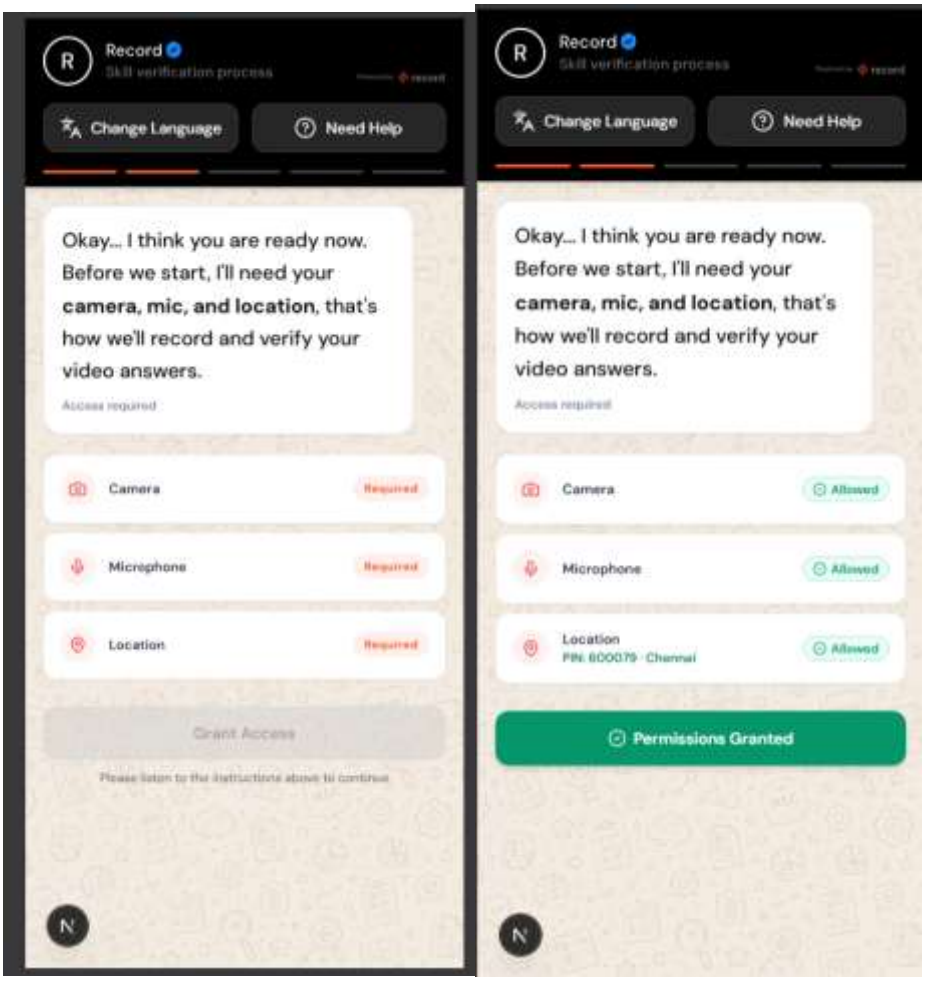

4. **React to Next.js Migration:** Migrated the existing React (Vite) frontend to Next.js using the App Router.

5. **Mandatory Location and PIN Code:** Made location information mandatory and added PIN code collection to the verification process.

6. **Ready-to-Start Page Enhancement:** Implemented word-by-word reading of the displayed instructions before allowing users to start the verification process.
