I have successfully completed the assigned task and deployed the application on AWS. I have included the screenshots demonstrating the implementation and provided the live deployment link for reference.

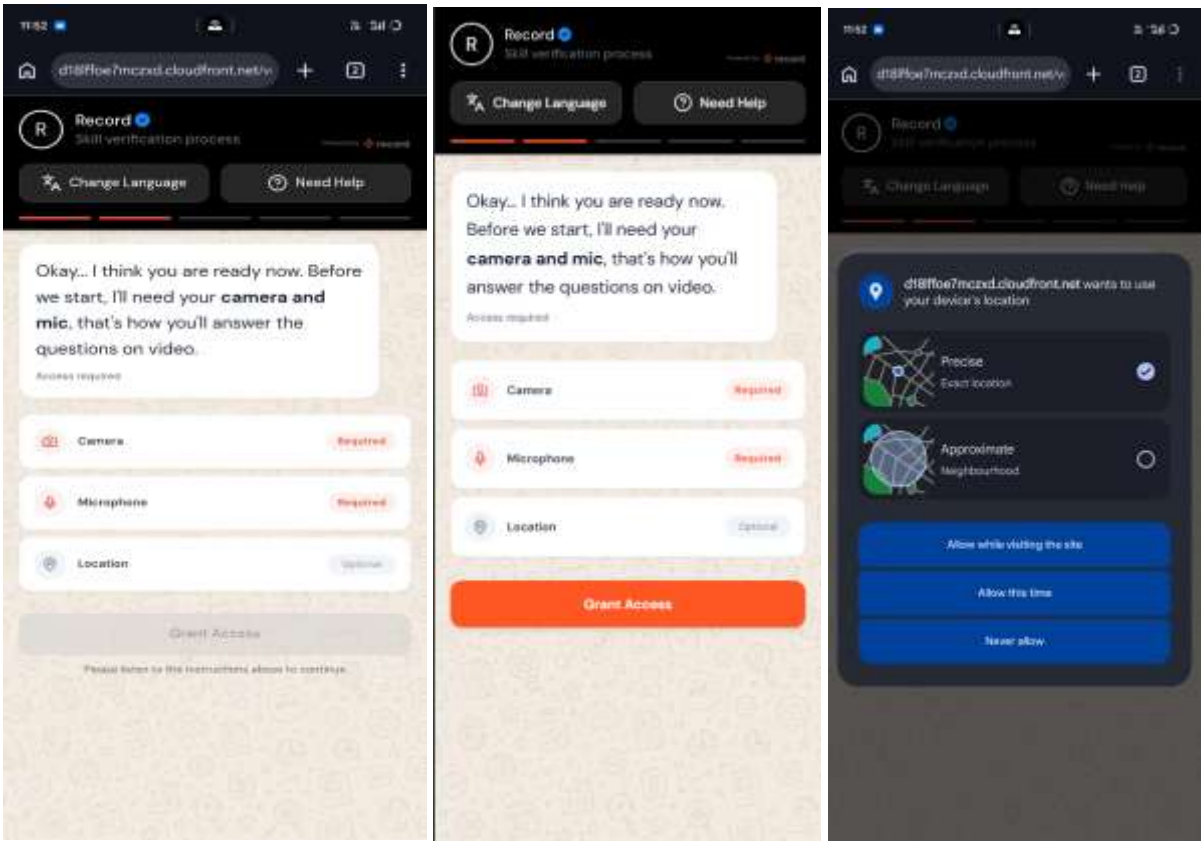

Note: The verification link uses a time-limited token and will expire after a certain duration. If you would like to review or test the working application, please let me know, and I will generate and share a fresh verification link.

Hi! I'm your verification guide from Record.
Which language would you like to continue in?
English
हिंदी
தமிழ்
తెలుగు
ಕನ್ನಡ
മലയാളം
Continue
Got it, continuing in English.
Record is hiring for the Warehouse Picker role, and we'd like to see how you actually handle real work situations before deciding.
This isn't a test with right or wrong answers. It's 3 quick questions about situations you'd actually face on the job. You just explain what you'd do, in your own words, on video.
Takes about 5 to 10 minutes. Your recruiter at Quess Corp will personally watch your answers, that's it, nobody else sees this.
Your camera and mic are only used for these 3 questions. Nothing is recorded before or after, and this chat only works for this one verification.

Here's your first situation.
1
SCENARIO · Q1
A CNC program that produced correct parts yesterday is now making parts that are 2mm too short in one dimension. The material batch and machine settings are the same. What is the most likely cause you would investigate first in the program?
